

## DD VAC Vacuum units

### Direct drive vacuum units:

The DDVAC series is the most popular vacuum unit in our programme. The unit don't need any maintenance, because it's a direct drive. The vacuum unit is available in models from 1.000m<sup>3</sup> up to 15.000 m<sup>3</sup>.

### Perfect for Frequency converter control:

The frequency converter ensures that the vacuum unit is working at the same pressure level all the time and in the most economical way. The power saving can be up to 20-40%.

### Standard silencing configuration:

All DDVAC vacuum units are fitted with an inlet and exhaust silencer, to minimize the noise level of the unit.

### Optional acoustic/outdoor housing:

With the noise reducing cabinet, it's possible to install the unit inside the factory. The cabinet is made of galvanized steel and aluminium so it can be used outside as well as weather protection housing.

Standard types:	Kwh	m3	Ps/pa.
