

Separation unit SP 005 724 series.

Technical data:

Models:

- A type (automatic emptying)
- C type (continuous vacuum)

Free filter area: 2,4 m²

Air capacity:

Max 4.000 m³/h

Filter types:

- Woven multi filament polyester or
- Precision woven monofil polyamide

Dimensions:

Height: 2.368 mm

Width: 2.029 mm

Depth: 1.232 mm

Weight: 560 kg

System control:

- A-30 controller
- 7" touch screen

Function of the separation unit:

The separators are designed for fully automatic waste processing and dump it into a container or a compactor, without any manual handling. The operation is fully automatic and there is no daily maintenance on the system.

The A- type separator stops the suction under the emptying process. This is mainly used for cutting room installations and sewing rooms with low waste volume.

The C- type separator has continuous vacuum, also during the emptying process. This is used for installations where continuous vacuum is needed like in sewing rooms, hosiery knitting and quilting machines.
