

A30 all in one system controller.

Simple control with lots of options

The newest generation controller with 7" colour touch screen brings the Waste-exit system controller in to the highest standards and offer users the features and flexibility that is expected from a well-engineered up to date system.

Expanding

In combination with Profi-net modules the system is already pre-programmed for many extensions, such as waste hopper sequence control. Expanding the system is easy made with just a dipswitch setting on the new equipment.

Integration:

The control units feature integration with frequency drives for the vacuum unit, along with options to external control or working on preprogrammed time schedules with automatic start and stop of the system. The panel is programmed in 4 standard languages, English, Spanish, German and Danish. Optional 2 more languages can be added.

Safety and quality is our priority:

All components used is both CE marked and UL listed from the well-known brands, Siemens, ABB, Schneider, Wieland and Metalwork (or SMC on request). Cabinets are built to comply with IEC/EN60204-1 or UL508 standards.
