

SC 200 Strip cutter.

Features:

1-50 cuts per minute fully controllable

Limit switches built in for control and fault indicator
24VDC power connection.

Inlet diameters:

SC200 with inlet 140, 150, 160, 180 or 200 mm

Pneumatics:

Air connection 1 / 4 inch threaded or 10mm hose
Air pressure 6-8 bar

Knives:

2 pcs made in High-speed steel DIN-17350 with 2 sides sharpened.

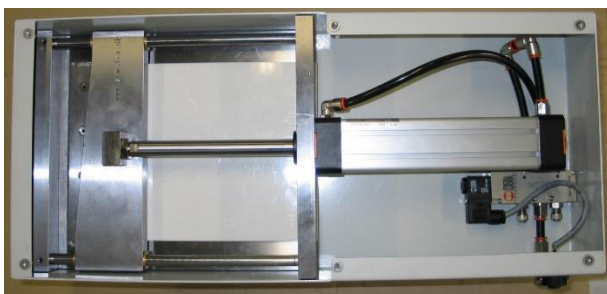

Dimensions:

	CSC-200
Height:	710mm
Width:	310mm
Depth:	110mm
540mm incl. Transitions	

Uni directional cutter with vacuum off function:

The guillotine-cutting device is designed to be maintenance free. There is no need for lubrication. The knives can be turned 180° and used again, so sharpening is only necessary every second time. The knives can easily be changed by the house mechanic and no adjustments are needed after fitting.

The cutter is built to be an alternative to rotating cutters that cuts the material in to small pieces, generates a lot of dust and has a high noise level. With the SC cutter the waste can be cut in to longer strips, so it's possible to bale and the reduced cuts, makes the dust created by the cutter extremely low. Noise level peak is max. 65 DbA.

Simple construction:

The simple construction makes the cutter almost maintenance free and the changing of blades can be made by a house mechanic.
