

Automated waste handling vacuum systems for cutting rooms.

As new technology is making the way into the industry and labor cost is going up, it makes sense to automate the waste handling process. New hi-tec. equipment produces faster and makes more waste. The operators time is spend on removing waste instead of concentrating on the machine performance. Removed waste takes a lot of floor space around the machines.

Waste hopper on end of conveyer band

Automatic pipe connection for movable cutters

Waste hopper on side of conveyer band

Floor sweep point

Our costumer's experience's.

- Elimination of non-value handling of waste.
- Less down time and repair of machines.
- Higher work rates 5-10%.
- Freer floor space for improved workflow.
- Minimizes trip and fall hazards in the working area.
- Less airborne dust.

Double waste hopper on end of conveyer band

Waste hopper for bandsaw

Waste draw for manual feeding of cutting table

25 years of experience and more than 75 systems installed in the fabric cutting industry globally, makes Waste-exit Clean Factory Systems unique and well proven.

Waste is automatically packed and ready for shipping.

Baled

Compacted

Compressed in bags

Vacuum generators and control options

The direct drive vacuum unit and the use of frequency inverters gives a unique possibility of making systems with extreme low daily running and maintenance costs.

The multi-language touch screen controller makes the operation of the system easy and simple. Adjustments and customizing of the system is made directly on the control box without use of costly software.

Expansion modules are already preprogrammed and can be added at any time, with just a dipswitch setting and an ethernet cable connection.

Laser welded segment pipes in diameters from 40 to 500 mm

The range of segmented pipes and ducting's gives flexibility in customizing each installation for the factory floor conditions and the number of machines connected to the system.

The smooth laser welded galvanized steel pipes is perfect for fibre and textile material transport. Even the connections of the pipes are made with quick fitting clamps, which give a smooth pipe joint that is easy to dismount without tools.
